Clearly Different

Choosing the Right Door Made Easy

When it comes to selecting the right door for your project, we're with you every step of the way. We pride ourselves on creating doors that match your design vision, make functional sense for your space and fall within your budget.

1. Choose Door Style
2. Choose Door Details:
Sticking Profile, Panel Option, Glass Option or Mirror
3. Choose Application:
Barn Door, Swing Door or Pair

What is the Right Door for the Opening?

We understand the different needs of every door opening. We'll help you recognize issues of durability for those high traffic areas, considerations of functionality for the given space, and the style demanded by your design and the aesthetics of the environment.

MDF

MDF (Medium Density Fiberboard) is a smart choice for many of your interior door needs. Not only are MDF doors stable, durable and environmentally friendly, but our super-refined MDF doors provide a remarkably smooth finish and outperform natural wood doors for painted applications.

Because of their homogeneous construction, MDF doors are more durable and resist warping, cracking and splitting. MDF allows

us to build more stable and architecturally correct doors and details.

MDF is an engineered wood product made from recycled and recovered wood fiber. Rest assured, we do not fill our MDF products with cheaper core materials (like many alternatives), and we never use low-density fiberboard.

All our MDF is CARB2 compliant and NAUF**
MDF is available on request.*

* California Air Resources Board

** No Added Urea Formaldehyde Medium Density Fiberboard

What is MDF

CHIPS

SAWDUST

SHAVINGS

MDF FIBER WITH RESIN

MDF (Medium Density Fiber) is a 100% recycled product that was Green before Green was cool, making it a great choice for doors. MDF is first produced by taking raw wood residuals (Chips, Shavings and Sawdust), passing through a steam digesting process to soften the wood fibers and then refining them to their individual cell fibers. We are essentially taking the memory out of wood and putting it back together in a two-dimensional board. These fibers are then dried and a thermal setting resin is introduced to the mix. From here, the matts of fiber are put into a steam heated platen press and under heat and pressure give us our net thickness needed.

Superior Structural Wood Edge

MDF holds screws well through the face, but not as well through the edge. We have worked diligently on designing a wood edge that provides a complete glue bond, without any gaps, increasing the structural rigidity of the door. Our wood edge will accept all of your hardware with ease.

FLUSH

V-GROOVE

From panel doors to barn doors, the wide selection we offer at Architectural Concepts is sure to match your design vision and bring high-quality craftsmanship to your hospitality space.

Primer

We use a high end, high build, WDMA primer on all our doors. This is an acrylic latex primer intended for priming interior and approved exterior MDF and composite substrates. This product dries fast, sands easily and will fill open grain woods and MDF with little or no fiber raise. Works with any type of topcoat: Latex, Oil, Acrylic and Lacquer.

Machining

With our state of the art CNC Machinery, we can prep any door, for any type of hardware.

Stile & Rail

Our stile and rail doors allow us to craft virtually any style of door while bringing a high level of craftsmanship and quality to our clients. With meticulous construction and the use of premium materials (that exceed industry standards), our stile and rail doors provide sharper corners, better depth and more stability than other comparable doors.

Engineered Stiles

We offer engineered stiles, built with an LSL core, which are excellent for large, oversized doors and pocket doors. It holds screws better than LVL and is available for 1-3/8", 1-3/4" and 2-1/4" doors.

Prefinished Top Coat

We can prefinish your MDF door with our unique, waterborne Acrylic topcoat. As a value-added service, this waterborne sealant is designed for use as a self-sealing topcoat. A strong build providing a durable finish with very good hardness and chemical resistance compared to traditional acrylic latex and Nitrocellulose finishes.

Our topcoat meets or exceeds KCMA test requirements for finishes and is low VOC and UL GREENGUARD Gold Certified for low chemical emissions. We can accommodate most gloss ranges and can be toned to almost any color.

Please ask your customer service representative for more information on pricing and lead times.

A202
Square Sticking (SS)
F Panel (F)

Panel Doors

The distinctive look of every panel door we manufacture is in the profile. The door profile is defined by the joints where the sticking and panels come together and the styles of each. Fortunately, we offer over 45 combinations of sticking and panel styles, so you can achieve the perfect profile look for your project. If not, we will be happy to help you through the process to create a custom solution.

Each of our panel doors are built with authentic stile-and-rail construction for architecturally correct results. You can choose from diverse panel door styles in configurations from one to nine panels.

Custom plant on Moldings

Sticking Options

Sticking is the pattern cut into the interior edges of every stile and rail - and is an essential component in your door's overall style. Stiles and rails are the vertical and horizontal wood pieces that create the frame of a panel door.

Louver Door Collection

Our striking louver doors provide not only unique style options, from traditional plantation style to coastal contemporary, but also serve a functional purpose as well, by offering both privacy and the airflow needed for certain rooms and spaces. Our louver panels are available in both vented and false configurations and can be added to most of our panel doors.

Custom Flush Doors

Our flush modern doors offer a sturdy, functional option for certain applications and aesthetic needs. Every one of our flush doors is engineered to resist warping and twisting. You can select from a wide variety of wood species or paint grade MDF to finish out your flush door. Depending on the size, most of our flush doors can be quite heavy. To reduce the weight, you can choose to add a tubular core, which reduces the weight but maintains the structural stability. For extremely large doors, inquire about our aluminum honeycomb construction.

AC STC Ratings

Sound Transmission Class (STC) Rating for Doors determines how successful it will be at blocking the movement of sound. Architectural Concepts MDF Doors are initially a good sound reducer, however, the door is just one piece of the equation. It is important to use the proper acoustical gasketing combinations to seal the gaps around the perimeter of the door opening. The gasketing combinations we list below, when tested with our doors, achieved a zero drop-off in our STC rating. *Ultimately, the hardware gasketing and perimeter sealing determine the sound rating that a door achieves.*

Our MDF Doors have been tested with hardware packages from National Guard Products in the following chart. All of these ratings are for operable single swing doors with the sound control hardware specified on the right-hand side of the table.

STC Ratings

Door Styles	STC Rating	Door Thickness	National Guard Products (NGP) Hardware Used:		
			Primary Seal	Threshold Saddle	Door Bottom
A100 - A200 Square Sticking (SS) Flat panel (F)	32	1-3/4"	5050 Twin Row	8144 (optional)	12T6
A100 - A200 Square Sticking (SS) Raised panel (R)	34			-or-	-or-
A300 - A900 Square Sticking (SS) Flat panel (F)	33		5075	896S-ADJ	225S x STC2
A300 - A900 Square Sticking (SS) Raised panel (R)	35

The Eclisse Pocket Door Frame kit

Eclisse Pocket Door Systems has found a way to re-invent the pocket door and checked off every box when it comes to eliminating all of the problems associated with pocket doors. We offer a complete pocket door system - galvanized steel frame kit with patented removable track so you never have to break drywall again. Our products are not only unique because they're unlike anything else currently offered in the marketplace but also high quality and come with a 12 year warranty so your customers know this is a product they can rely on.

Extractable Track System

Metal Track Holder

What makes us unique that no other pocket door system out there offers?

Patented Removable track

Never have to break drywall to remove the track which is huge from a maintenance standpoint

Frame is all galvanized steel

No wood so no warping

12 year parts warranty

Product has been cycled tested to last this long

Accessories

Different soft closers, self-closer, double door synchronization kit make the function unique *(sold separately)*

Runner kit

Tested over 100,000 cycles. A difference from our runners to most of all others is that everything is covered by durethan that helps to contain the grease inside the ball bearing and prevent and avoid the dust

2x6 Kits

Allow electrical conduit on both sides of the wall where the door pockets, no more dead wall space

Design

Use any door you like 1-3/8", 1-3/4" or 3/8" frameless glass on the same system

We have a variety of standard and well as non-standard sizes we carry for 2x4 and 2x6 wall frame kits in standard sizes for single and double pocket doors. The Eclipse galvanized steel frame kit is snap-click (no screws required!) so its quick and easy for a do-it-yourselfer or an experienced contractor to install. The snap-click frame can be assembled in 15 minutes or less and the reinforced horizontal bars have an inverted swallowtail-shaped profile for improved resistance to pressure and predrilled to make attaching drywall even easier.
